

SMS messages, prices (MT)

The SMS prices are based on a prepaid payment. The higher the amount you use then the lower your price will be to send per message.

Prices when charging at least 50 Euro

M3 Image message		€ 0,15	€ 0,18

Prerequisites for using the SMS-Gateways are the my.SimpleSMS Software and a customer access. HTTP, SMTP (e-mail) and XML-interfaces are available for own programming.

Single and bulk SMS, as well as M3 image messages can likewise quickly and easily be generated and sent via the my.SimpleSMS Software.

High Quality Route. The High Quality Route offers you the best SMS quality! Top delivery times thanks to direct connections to the SMSC (Short-Message Service Centre) of the mobile radio operator. Normally the delivery time is between 3 and 14 seconds. Suitable for alerting and sending when time is of the essence.

* = The **Medium Quality Gateway** takes approx. 15-60 minutes to deliver. Suitable for sending adverts where a time lag can be accepted in the purchase. The Gateway is only available via the my.SimpleSMS software for bulk sending and cannot be selected via the HTTP, XML or SMTP interfaces. Likewise the selection of the Gateway is not possible for single SMS. The availability of this Gateway is not guaranteed.

SMS-Features:

Sender identification. With the sender identification you can, for example, give your company name as the sender of the SMS. The sender is made up of up to 11 alphanumeric characters – this will be shown instead of the sender's number on the receiver's mobile phone, that is why it is not possible to reply.

Transmission confirmation. For every message sent you receive the status return from the respective mobile radio operator directly in your my.SimpleSMS software. Many status types are available, e.g. "SMS sent", "received on the mobile phone", "connection not given" etc. Thus you can clear your existing contact lists of numbers that no longer exist and so save money in future mailings.
